                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        20;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A, Accession: T48897
A, Accession: T48897
A, Accession: T48897
A, Status: preliminary; translated from GB/EMBL/DDBJ
A, Molecule type: DNA
A, Molecule type: DNA
A, Residues: 1-718 cMD-
A, Cross-references: EMBL: X95590; NID:g1435133; PIDN: CAA64843.1;
A, Experimental source: strain S6

Transducer protein htpVI (similarity) - Halobacterium salinarum
NyAlternate names: methyl-accepting transducer protein htp; transducer protein htp6
Syspecies: Halobacterium salinarum
C;Species: Halobacterium salinarum
C;Date: 21-Jan-2000 #sequence_revision 21-Jan-2000 #text_change 02-Sep-2000
C;Accession: T44597
Existang, W.; Brooun, A.; McCandless, J.; Banda, P.; Alam, M.
Proc. Natl. Acad. Sci. U.S.A. 93, 4649-4664, 1996
A;Title: Signal transduction in the archaeon Halobacterium salinarium is processed throu A;Reference number: Z22804; MUID:96209786; PMID:8643458
A;Accession: T44597
A;Accession: T44597
A;Accession: preliminary: translated from GB/EMBL/DDBJ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     287 AAADDALATMIDIDBATDGVTAGVEQLGERAADVESVTGVIDDIAEQTNMLALNASIEAA 346

Responds to light changes through the variation of the level of methylation. Also acts as a chemotransducer.
                                                                                                                                                                                                                              Gordeliy V.I., Labahn J., Moukhametzianov R., Efremov R., Granzin J.,

                                                                                                                                                                                                                                                                                                                                                                               "The primary structure of sensory rhodopsin II: a member of an additional retinal protein subgroup is coexpressed with its transducer, the halobacterial transducer of rhodopsin II."; Proc. Natl. Acad. Sci. U.S.A. 92:3036-3040(1995).

-!- FUNCTION: Transduces signals from the phototaxis receptor sensor rhodopsin II (SR-II) to the flagellar motor. Responds to light changes through the variation of the level of methylation. Also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  acts as a chemotransducer.
SUBCELLULAR LOCATION: Integral membrane protein (By similarity).
SIMILARITY: Contains 1 methyl-accepting transducer domain.
SIMILARITY: Contains 1 HAMP domain.

                                                                                                                                                                                   methyl-accepting protein associated with sensory rhodopsin I.";
Proc. Natl. Acad. Sci. U.S.A. 89:11915-11919 (1992).
-!- FUNCTION: TRANSDUCES SIGNALS FROM THE PHOTOTRXIS RECEPTOR
SENSORY RHODOPSIN I (SR-I) TO THE PLAGELLAR MOTOR. RESPONDS TO
-!- LIGHT CHANGES THROUGH THE VARIATION OF THE LEVEL OF METHYLATION.
-!- SIMILARITY: CONtains 1 methyl-accepting transducer domain.
-!- SIMILARITY: Contains 2 HAMP domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      95;
